

ETNA

Premium Tools
for Perfectionists.

Monolithic restorations are essential in prosthetic dentistry and require precision and flexibility to achieve an optimal shape and surface quality. Komet's new **ETNA grinders and polishers** meet the demands of modern all-ceramic materials with their durability, efficiency, and precision.

ETNA grinders ensure superior material removal and direct surface polishing, while ETNA polishers deliver a high-gloss finish with exceptional durability in two steps. Designed for versatility, ETNA adapts to all ceramic shapes, empowering professionals with premium tools for exceptional results.

Advantages ETNA Grinder

- Exceptionally long service life
- Effective on all types of ceramic, including zirconia
- High concentration of diamond grains in a stable special bond
- Excellent stability of the shape and edges
- Fine surface finish - ideal for subsequent polishing

Advantages Matching ETNA Polisher

- Special diamond grit: Creates a flawless surface finish with minimum pressure.
- Perfect for direct polishing.
- Two-step process: Achieves a high-gloss finish in just two steps.
- Softer material for effortless polishing.
- Flexible application: Perfect for various ceramic shapes and sizes
